CLOSE JOINT CEILINGS

- Easy to assemble
- Full closing of cavity
- Full range of colours
- Customer choice

A complete closing of the cavity can be obtained with strips “SERIE H”; this is the ideal solution for suspended ceiling that require high compactness and, in the meantime, easiness of disassembly for inspection.

Strips “SERIE H”, with rounded edges, are made of prepainted aluminium and used in modular suspended ceilings with close shutter. Each modular element can be unhooked from its main structure and allows full accessibility for upper service maintenance.
